

A ONE-PAGE PLAN FOR CRE OWNERS

From Property Intelligence to Portfolio Intelligence.

Five phases that turn data & digital infrastructure into an owner-controlled digital asset — repeatable property to property.

LAYER 1 — MANAGED DATA & DIGITAL INFRASTRUCTURE

01

Clarify

PPP REVIEW / AUDIT

Define success metrics, map who owns what, identify leakage, document what's trustworthy and portable.

02

Connect

MANAGED DDI

Establish secure, owner-controlled connectivity — repeatable property to property. One backplane, no shadow networks.

03

Collect

MANAGED DDI

Capture and normalize high-fidelity, usable data into a consistent model you can reuse across the portfolio.

04

Coordinate

PROPERTY + PORTFOLIO INTELLIGENCE

Govern identity, access, privacy, lineage, retention, rules of use — vendors plug in under your rules.

05

Control

PROPERTY + PORTFOLIO INTELLIGENCE

Enable any decision engine or workflow — vendor platform, internal analytics, any LLM — to act under owner permissions.

THE VILLAIN

Fragmented, vendor-controlled data & digital infrastructure that creates silos, lock-in, and one-off buildings — so your building's intelligence becomes someone else's asset.

OWNER OUTCOMES

- NOI growth — new revenue and fewer leaks
- Operational control — one owner standard, vendors plug in under rules
- Risk reduction — privacy, security, compliance, auditability
- Tenant experience — Seamless Mobility · Security · Stability · Speed · Service
- AI readiness grounded in governance — a portable, durable digital asset

"If you don't own your data & digital infrastructure, your vendors do."
