

PEAK PROPERTY PERFORMANCE® · SELF-ASSESSMENT

The PPP Review Teaser Worksheet.

A 15-minute self-assessment for one of your buildings — a preview of the questions OpticWise asks owners during a full Data & Digital Infrastructure (DDI) Review.

HOW TO USE THIS WORKSHEET

Pick one building. Be honest. See where the leakage is.

This worksheet won't replace a real Data & Digital Infrastructure (DDI) Review. What it will do is give you, in about fifteen minutes, an honest read on where your data & digital infrastructure is helping you operate — and where it's quietly working against you.

Six short sections, each built around one diagnostic question. Each section gives you a place to write what you know, mark what you don't, and flag what would need to change for that part of the property to compound instead of leak.

HOW IT WORKS

- 1. Pick one property. Use this worksheet for that one. (Don't try to do the whole portfolio at once — that's the DDI Review.)
- 2. Work through the six sections in order. Skip nothing. If you don't know an answer, that is the answer — circle the "don't know yet" option and keep going.
- 3. At the end, use the score sheet to see your readiness band and the two or three highest-leverage moves for this asset.

"If you don't own your data & digital infrastructure, your vendors do."

PROPERTY UNDER REVIEW

PROPERTY NAME	ASSET TYPE
LOCATION	DATE OF REVIEW
OWNER / SPONSOR COMPLETING THIS	PROPERTY MANAGER

01 Scoreboard

What outcomes are you actually accountable for on this asset over the next 12 months?

List the three KPIs that matter most for this property right now.

Of those, which one is most at risk?

For the at-risk KPI, what would have to be true digitally for you to move the number?

If you can't connect at least one of your top KPIs to a specific digital signal — utility variance, ticket velocity, after-hours emergencies, water risk, occupancy — you're operating on results, not on causes.

02 Least-Control

Where do you have the least control today on this property?

Mark every area where you (the owner) do NOT have full administrative control today:

- ☐ Network & segmentation ☐ Identity & access (admin credentials) ☐ Vendor contracts
- ☐ Data exports ☐ OT / building systems integration ☐ Tenant connectivity
- ☐ Security & access events ☐ Utilities data ☐ Don't know yet

For the area you marked as least-controlled, who currently holds the keys?

If that vendor or party walked tomorrow, how long until you could operate independently?

- ☐ Days ☐ Weeks ☐ Months ☐ Don't know yet

"Don't know yet" answers count. They're the leakage you can't see — and the part of the asset that isn't actually yours.

03 PM Model

How is this property managed, and which vendor relationships are non-negotiable?

Property management on this asset is:

☐ Owner-managed (in-house) ☐ Third-party PM ☐ Hybrid

If third-party PM, are any of their tools or vendors non-negotiable?

☐ Yes — list them ☐ No ☐ Don't know yet

For each non-negotiable, do you have data export rights and admin credentials in writing?

Third-party PM is not a blocker. It's a constraint. The work is to put a PM-compatible owner standard in place — one backplane, segmented access, no shadow networks, required exports — that the PM plugs into.

04 OT / LV Governance

When systems are locked down by a vendor, who actually owns integration?

Number of separate networks running in this building (best estimate):

☐ 1-2 ☐ 3-5 ☐ 6-9 ☐ 10+ ☐ Don't know yet

When a building system is locked by a vendor (HVAC, access, lighting, video), who at the owner level can make changes without that vendor present?

Are integration responsibilities documented in writing — with named owners, escalation paths, and admin credentials held by you?

☐ Yes, fully ☐ Partially ☐ No ☐ Don't know yet

If a system fails at 2 a.m., who has the credentials and authority to restore it?

Multiple networks and undocumented integration ownership are how a "rogue network time bomb" gets built — quietly, over years, until a small failure turns into emergency remediation.

05 Asset Economics

What asset types matter most in the next 12-24 months — and is the digital standard repeatable?

In the next 24 months, which asset types are most strategic for your portfolio?

If you had to onboard a new property in 90 days, do you have a documented owner standard that any new building can plug into?

☐ Yes, documented & tested ☐ Partially ☐ No — every property is one-off

In your last vendor renewal, were data export rights, admin credentials, and portability written into the contract?

☐ Yes — all three ☐ Some ☐ None ☐ Don't know yet

Where would a "diligence premium" most help you in the next 12 months — refinancing, sale, insurance narrative, or new acquisition?

A repeatable owner standard is how a property becomes a portfolio. Without it, every new building restarts from zero — and so does every diligence story.

06 Actionable Data

What are the top three monthly plays you'd actually use — not dashboards, plays?

Write down the three monthly or weekly plays that would change how you operate this property if you had them:

For each, do you have export-level access to the data needed to run that play today?

☐ All three — yes ☐ One or two — partial ☐ None ☐ Don't know yet

Common plays owners ask for — mark any you'd want monthly:

☐ Utilities variance & outliers ☐ Maintenance ticket velocity ☐ After-hours emergency events

☐ Water risk visibility ☐ Access & occupancy patterns ☐ Renewal & lease-up signals

Dashboards aren't durable capability. Decision outputs and weekly plays are. The right test is "what changed last month because of the data?" — not "do we have a dashboard?"

SCORE SHEET

Your honest read on this property.

For each section, score yourself 0 to 3:

- 3 — Documented, governed, and operated by the owner today.
- 2 — Mostly in place, with known gaps.
- 1 — Partial / informal / vendor-led.
- 0 — Not in place, or "don't know yet."

#	SECTION	SCORE
01	Scoreboard	☐
02	Least-Control	☐
03	PM Model	☐
04	OT / LV Governance	☐
05	Asset Economics	☐
06	Actionable Data	☐
TOTAL (out of 18)		☐

WHAT YOUR TOTAL SCORE MEANS

0 - 6 • VENDOR-RUN

Your property's intelligence is mostly someone else's asset today. The fastest move is a Clarify-only DDI Review — map ownership before any tech decisions.

7 - 12 • MIXED

Real foundations in places, but not yet a repeatable owner standard. A one-building pilot can prove portability and expose where to standardize first.

13 - 18 • OWNER-RUN

Strong control on this asset. The leverage now is repeatability — turning Property Intelligence into Portfolio Intelligence across the rest of the assets.

Want this for the whole property — done with you, not by you?

This worksheet is a teaser. A full Data & Digital Infrastructure (DDI) Review — also known as a Peak Property Performance® Review — is structured to give you decisions, not dashboards. We do it on one building first, so you see the standard before you scale it.

A DDI Review delivers:

- A clear map of who owns what — networks, systems, contracts, credentials, data — across the property.
- A leakage diagnosis: where OpEx, CapEx, control, and risk are quietly bleeding out.
- A short list of monthly plays your team can act on inside 30-60 days, using data you already have.
- Vendor-renewal language for export rights, admin credentials, and portability — so the next renewal changes the power dynamic.
- A one-building plan that becomes the owner standard for the rest of the portfolio.
